Great, good to know. I got a message that said that it would damage the file when I did rename it.

Also thanks for Powertech/Azarga email. I hadn't heard, but I forwarded it to folks in our shop who work with them directly.

Thanks Wendy. That worked. I will be showing to my team, hopefully later today.

Michelle,

Download the file and rename the extension from .pdf to .mdb and let me know if it works. If it doesn't then I'll need to send it to a gmail account. You need to first select an operator before moving forward.

I built the database, so I really don't have a sense of cost. But it'd be free to CA, if they think this database will meet their needs. And if they want to do a bit of customization, they should have some in-house staff to do some simple modification. I'm also happy to help in that respect

if it's not too involved.

Wendy

Hi Wendy,

Thanks for sending this. I was out most of the day yesterday, so just getting back with you.

The state is claiming they do not have the \$\$ to establish a database and instead they are performing a "feasibility study" which if you can believe this will be completed in December 2015, at which point they will request state budget \$ for a contract to hire someone to make a database for them. And then another year or two for the database.

So I wonder how much your database cost? And you were correct, whatever you sent was blocked.

Thanks, Michele

Subject: AE database

Michelle,

I briefly reviewed the letter that EPA sent to the State and I noticed that the EPA is asking that they develop a database. R8 has developed an AE database which captures the necessary information for the EPA HQ AE database. I wonder if R9 would be interested in offering this to CA and if CA would be interested in adapting this for their needs. The beauty would be that the State provides you with the data fields that HQ is asking for and of course the state would save time/effort/money in developing it from scratch.

I've attached it for you to take a look at. There may be some security issue in sending this database through Outlook. If that's the case, let me know and I can try a different email account or rename it to make it go through.
